

TEMPESTTM
excellence

Governor Gaskets

The Tempest gaskets are fully compliant with all FAA test requirements. They are certified for use on all reciprocating engines that formerly used MS or AN type governor gaskets. In Tempest tradition, the design of the gaskets is an improvement over MS gaskets. They are successfully tested to withstand 1000 psi. A 20% increase over the MS test requirements.

Factory applied DC4 lubricant to prevent gasket from sticking to engine or governor.

The specialized black coating on the stainless steel screen which is "vulcanized" between the outer layers of the Buna N rubber makes the gasket "monolithic" in construction. The rubber cures into a solid block with the screen trapped inside it. This special process is designed to eliminate leaks that can occur with the laminated die cut gaskets.

APPROVED REPLACEMENT FOR THESE PART NUMBERS

Hartzell: B-1104

McCauley: B-20024

Woodward: 209217

Hamilton Standard: 57354

MS: MS100009

MS: MS9144

Cessna: 531083

TCM (Continental): 531083

AA9144
