TORNADO

3000 *Taking Aviation by Storm*

**A revolutionary dry air pump
with proven technology designed
to reduce premature failures**

**New Revolutionary
LRT Oil Drain**

Patent pending feature is designed to drain oil, caused by a leaking Garlock Seal, before it reaches the drive coupler. Provides a tell tale leak path.

Wear Indicator Port
(not shown)
Internal visual observation port to determine vane wear.

Closed Front Ends

Designed to eliminate oil and oil residues from entering into the pump. Helps prevent pump failures caused by oil entering into the drive mechanism or rotor and vanes.

Monolithic Construction

Patent pending feature with integrated alignment lands provide extreme co-axial component accuracy eliminating centering bands. Reduces premature failures caused by rotor and stator bumping under severe operating conditions. (Eliminates unnecessary seals and leakage through the pump body).
